Reference Document

This is the pristine, undamaged original. Every corrupted file in the pack is a descendant of this document, so a working repair tool should recover the same 5 pages, the same text, the same table, the same chart and the same image you see here.

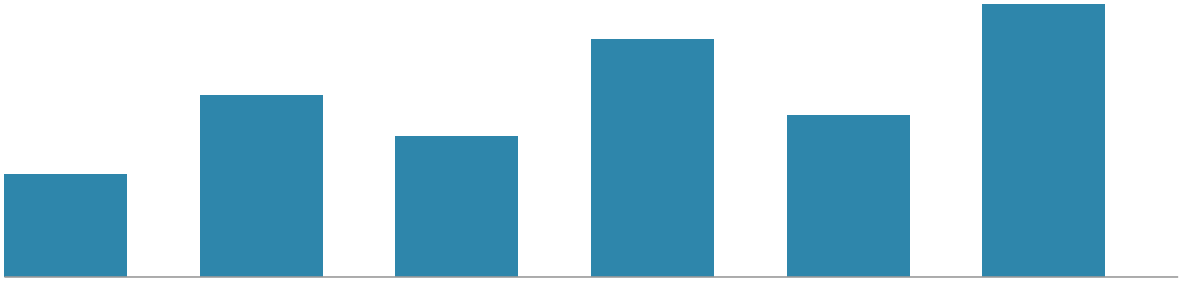

Figure 1: raster image (JPEG XObject) - if this is missing, image recovery failed.

Page 2 - Text body

Paragraph 1. The quick brown fox jumps over the lazy dog. Sphinx of black quartz, judge my vow. Pack my box with five dozen liquor jugs. This text exists so recovery quality is measurable: count the words, check the glyphs, confirm nothing shifted. A repair tool that returns a file which opens but silently drops a page is not a repair tool.

Paragraph 2. The quick brown fox jumps over the lazy dog. Sphinx of black quartz, judge my vow. Pack my box with five dozen liquor jugs. This text exists so recovery quality is measurable: count the words, check the glyphs, confirm nothing shifted. A repair tool that returns a file which opens but silently drops a page is not a repair tool.

Paragraph 3. The quick brown fox jumps over the lazy dog. Sphinx of black quartz, judge my vow. Pack my box with five dozen liquor jugs. This text exists so recovery quality is measurable: count the words, check the glyphs, confirm nothing shifted. A repair tool that returns a file which opens but silently drops a page is not a repair tool.

QA Fixture

Page 5 - Checksum text

If your tool recovers this page, it recovered the last object in the file. That is the hardest part of a truncated or xref-damaged document, because the trailer and the final page object are usually the first casualties. Marker string: ZEBRA-9-DELTA-OK.
